PROJECTS

My Portfolio

https://my-portfolio-anibal-carre.vercel.app/

Weather App with Next.js

The "Weather App with Next.js" project is a web application that uses Next.js, React, and Tailwind CSS. This application consumes the OpenWeather API to provide real-time weather information, allowing users to check the current weather and forecasts for the upcoming days.

Users App

The "Users App" project is a web application built with Next.js, Bootstrap, and integration with the JSONPlaceholder Users API. The smooth navigation of Next.js and the responsive design of Bootstrap ensure a user-friendly experience. It's an efficient and practical solution for user management.

University CRUD

This platform I created simulates a university environment, offering customized views for administrators, students, and professors. Each role has access to integrated CRUD operations, facilitating data management. With an intuitive design adapted to each function, it provides a comprehensive solution for administration in the university context. It was developed using PHP and MySQL.
